These pulmonary capillaries create the respiratory membrane with the alveoli (Figure 22.4.2). As the blood is pumped through this capillary network, gas exchange occurs. Although a small amount of the oxygen is able to dissolve directly into plasma from the alveoli, most of the oxygen is picked up by erythrocytes (red blood cells) and binds to a protein called hemoglobin, a process described ...

The overall chemical reaction by which ammonia is converted to urea is $2 \text{NH}_3 + \text{CO}_2 + 3 \text{ATP} + \text{H}_2\text{O} \rightarrow \text{H}_2\text{N-CO-NH}_2 + 2 \text{ADP} + 4 \text{P}_i + \text{AMP}$. The urea cycle utilizes five intermediate steps, catalyzed by five different enzymes, to convert ammonia to urea, as shown in Figure 22.12 .

Respiratory quotient (RQ) is the the moles of carbon evolved per mole of oxygen consumed. It is an indirect but a fairly rapid method of measurement to determine the lack of substrate in the growth medium. The DO-stat works on the principle of respiratory quotient and thus the feeding pump is turned on/off depending upon the concentration of dissolved oxygen in the fermentation medium. The ...

Respiratory volume is dependent on a variety of factors, and measuring the different types of respiratory volumes can provide important clues about a person's respiratory health (Figure 22.19). Figure 22.18 Respiratory Volumes and Capacities These two graphs show (a) respiratory volumes and (b) the combination of volumes that results in respiratory capacity.

NCERT Solutions CBSE Sample Papers Chemistry Class 12 Chemistry. NCERT IN TEXT QUESTIONS 7.1. Why are pentahalides more covalent than trihalidcs? Ans: The group 15 elements have 5 e-1 s in their valence shell. It is difficult to lose 3e-1 s to form E 3+ and even more difficult to lose 5e-1 s to form E 5+.Thus, they have very little tendency to form ionic compounds.
