Mesh analysis (or the mesh current method) is a method that is used to solve planar circuits for the currents (and indirectly the voltages) at any place in the electrical circuit.Planar circuits are circuits that can be drawn on a plane surface with no wires crossing each other. A more general technique, called loop analysis (with the corresponding network variables called loop currents) can ...

Remember that for capacitors, $i(t) = C \cdot dv / dt$.Note that the current through the capacitor can change instantly at $t=0$, but the voltage changes slowly.. RL Circuits Charging. If the inductor is initially uncharged and we want to charge it by inserting a voltage source V s in the RL circuit: . The inductor initially has a very high resistance, as energy is going into building up a magnetic field.
