– Genetic engineering is currently a moral gray ground, as it delves into tinkering with the natural processes of the body. Is this a science humans should pursue? Presumably, from this standpoint, what nature gave us in the first place should be good enough. – Genetic engineering also raises the question of compliance. Genetically altered babies will have no say in what’s being done to their bodies before birth, and consequently will have to live with whatever happens as a result of ...

[Genetic Engineering Will Change Everything Forever...](#)

Genetic engineering involves the deliberate modification of an organism's characteristics. This process occurs when there is direct manipulation of the genetic material through the use of biotechnology. Paul Berg made the first recombinant DNA molecule in 1972 by combining a lambda virus with the monkey virus SV40. This process can either insert genes into the genetic sequences or remove them.
